10x16 Treated Pavilion with Caramel Stain and Burnished Slate Metal Roof

Sheds 365® proudly offers a 5-year warranty!

If you find a defect in the materials or craftsmanship during the first 5 years you possess a new Sheds 365® building, we will repair it free of charge. We strive to build and sell high quality products at a fair price with superior customer service.

We source materials that are made specifically for the outdoor storage shed industry to withstand the outdoor environment.

ABOUT OUR PRODUCTS

Sheds 365® offers American-made storage solutions that raise the bar for the whole industry. Our innovative manufacturing facilities are producing superior quality buildings that are sold at an affordable price. Every shed, barn, garage and metal building is handmade and built to last, which is why we offer a 5-year warranty.

ALL STRUCTURES

PRESSURE TREATED FLOOR STRUCTURE

- All floor frames are leveled and squared at the start of construction to ensure consistency throughout the build.
- Floors are constructed with pressure treated 2x6 joists.
- Floor joists are set on top of ground contact rated, pressure treated 4x6 notched runners.
- 8' & 10' buildings are placed on 2 runners at a 65" outside to outside spacing for even weight distribution.
- 12' buildings are placed on 4 runners for even weight distribution.
- Flat joists are secured to the runners at front and rear with lag screws for additional strength.
- Floor joists are set at 16" on center for all sheds. Garages are set at 12" on center.

TONGUE & GROOVE FLOORING

- Engineered tongue and groove flooring is water resistant, helps prevent gapping and separation and adds overall strength and rigidity to our structures.
- 3/4" engineered tongue and groove flooring is used for all garages for long-lasting strength, stability and enhanced moisture-resistance.
- Makes cleanup easy and extends the life of the floor. Backed by a 1/10-year limited warranty.

2x4 CONSTRUCTION

- All walls and trusses are constructed from top grade 2x4 lumber spaced at 24” on center providing the same structural integrity as most residential homes.
- Walls are squared and plumbed to ensure we have a seamless, vertical structure.
- Trusses and door frames secured with gang nail truss plates for strength.
- “L” framed double studs at ends of each side wall for added strength.

FASTENERS

- Coated ring shank nails are used for construction providing no corrosion and a more secure joint.
- Metal siding, roofing and trim are installed using high quality metal screws with washers for a tight hold and water resistance.

HARDWARE

- Heavy duty T-hinges with staked pins and nickel nylon bushings provide consistent, smooth door operation.
- Steel T-handle and D-handle combination provides sturdy, lockable access for the door.
- Spring latch barrel bolts are powder coated and ergonomically shaped to make latching and unlatching simple and secure.
- Aluminum threshold plates protect high traffic areas entering through shop-built doors and roll up doors.
- Adjustable, zinc barn door braces help ensure door maintains squareness.
- Door spring kits prevent door from swinging out damaging siding or windows.

METAL STRUCTURES

Metal buildings are shipped with cross bracing to protect the integrity of the building during transport.

METAL POSITIONING

- Metal siding is installed in a horizontal position which adds strength to the overall structure.
- On styles where vertical metal is available, 2x4 horizontal bracing is added between every stud for additional strength.
- Metal roofing is installed vertically to minimize the buildup of debris, snow and water.

PAINTED SMARTSIDE® & TREATED STRUCTURES

2x4 CONSTRUCTION

- Double studs every 48” to line up with siding joints to ensure siding overlaps stay tight.
- Double top plates for added strength.
- Loft joist set on top of the top plates to provide additional strength to our lofted building lofts.

ROOF INTEGRITY

- 7/16” OSB roof decking provides strength.
- Roofing felt on all painted and treated buildings adds additional moisture barrier.
- Metal roofing is installed vertically to minimize the buildup of debris, snow and water.

EXTERIOR FINISH

- 2 coats of paint/stain ensure even coverage and a durable finish.
- Matching metal trim is backed by the same warranty as the roof.
- LP® SmartSide® and Trim reduce maintenance on painted structures.
- Treated buildings utilize pressure treated 1x4 trim to resist weather and insects.

BUY OR RENT-TO-OWN. NO CREDIT CHECK!

Sheds 365® offers an affordable monthly rent-to-own program. It's easy to get signed up. There is no credit check, and everyone is approved! All we require is a small security deposit and the first month's rent. We offer 36, 48 and 60 month contracts.

LP Roof Sheathing with SilverTech (both), LP SmartSide Panel with SmartFinish and Work Bench (left), LP SmartSide Panel with SilverTech and 3-Tier Shelving (right).

72" Transom Window in Loft

French 9-Lite Doors

* Our Sheds 365® ramps are constructed using purpose made, diamond plate top mounting brackets and end cap brackets attached to four pressure treated 2x6 boards. Supplied ramps come as a pair of two that can be moved along the J channel bracket mounted to the building to make one solid structure or two separate ramps.

Each ramp section is certified to 1,500 pounds with the set having a 3,000 pound certification.

8' and 10' wide buildings are measured at the base. 12' and 14' wide buildings are measured eave to eave due to Department of Transportation regulations.

COLOR OPTIONS

Colors may vary by region. Contact your local sales location for color availability in your area. Please note that printed colors are a representation and should only be used for general guidance purposes as actual colors may vary. Upcharges may apply to certain customization options.
